

BizXcel Data Warehouse

About BizXcel

BizXcel is an innovative information technology and creative training/consulting group with offices in both Canada and the United States. We do what an organizational management company should do – we make your job easier and your organization better.

Our team believes in empowering clients beyond analytics and ensuring you are confident and excited to work with us. We strongly believe that every person should have a high level of confidence in the decisions they are making. That it is possible to run an organization based on solid information. That decisions should always be backed up by evidence. That people and organizations are far more successful; when they have the right tools in their hands and know how to use them versus merely using intuition or watching what the next guy is doing. That data isn't just for IT people, but it can and should be for all types of users and skill levels. Data analytics is who we are and what we do best.

In May 2019, BizXcel was recognized by Qlik at their Global customer and partner conferences as the 2018 Global MSP Partner of the Year for our commitment to providing excellence. BizXcel has been a Qlik® Reseller partner for over 10 years and maintains their Insurance Specialization and is recognized as an Authorized Managed Service Provider. BizXcel continues to complete research and development to bring value to their customers and it has led to the team having an incredible year providing analytics to their customers.

How the BizXcel Data Warehouse Can Support Your Organization

BizXcel understands the needs and demands of large mutual insurance customers for a solution that houses and maintains their data, whether you have access to the original data source or not. That is why BizXcel has developed the BizXcel Insurance Data Warehouse.

This agnostic data warehouse allows you to access and archive your existing data and transform it into usable data structures which you're then able to query directly or load into your Qlik Sense® application.

This insurance data warehouse supports:

- Organizations who are moving to a new system or vendor. This product will help you capture the historical data from the existing system. It creates a staging area for any data that will be connected/imported into the new system.
- Organizations who have different systems for different things i.e. policies in one system and claims in another, all of the data can be put into the data warehouse to bring it together for reporting and analysis prep.
- Companies with large data sets that need a data warehouse for staging to provide performance in their analytics tool or for staging for other actuary work and actuary tools.

Due to BizXcel's work and reputation in the insurance space, our team understands the nature of your data. Our expertise allows us to support your organization in retrieving the data to ensure it moves with you to the BizXcel Data Warehouse and no data is left behind. So, whether you're currently using Qlik® or using BizXcel's Insurance Analytics Solution, you can still house your data and run reports with our data warehouse.

BizXcel holds over 20 years of knowledge and expertise within the insurance industry which has allowed our team to support many insurance companies with their needs and requirements in the forefront.

BizXcel's Insurance Analytics Solution can transfer your data over to the data warehouse ensuring your merge is as seamless as possible and your data remains at your fingertips. Through the organizational merge, BizXcel can enhance your reporting based upon your individual needs.

Contact

If your organization has questions around the housing and maintenance of your data and how to enhance your reporting capabilities, please contact Hannah Gzik for more information.
